

Microphone buzzing sound fix

Luis Bigas

My microphone had a buzzing sound, so I followed this steps to fix it.

This worked using pulseaudio, on a Lenovo thinkpad x240 with Debian.

Open file

```
sudo "EDITOR" /etc/pulse/default.pa
```

Write inside file

```
### Enable Echo/Noise-Cancelation
load-module module-echo-cancel aec_method=webrtc
    aec_args="analog_gain_control=0
    digital_gain_control=1"
    source_name=echoCancel_source
    sink_name=echoCancel_sink
set-default-source echoCancel_source
set-default-sink echoCancel_sink
```

Execute the following commands to restart pulseaudio

```
pulseaudio -k
pulseaudio --start
```
